

Tuples:

Tuples are ordered, immutable sequences that are similar to lists but cannot be modified once created. Tuples are defined using parentheses ().

Example:

Input

```
my_tuple = (1, 2, "three", 4.5)
print(my_tuple) # Output: (1, 2, "three", 4.5)
```

Tuples unlike sets and lists cannot be changed. They are immutable.

Output

```
PS C:\Users\lynnj\OneDrive\Desktop\Data_Structure>
ktop/Data_Structure/tuples.py
1
0
(1, 2, 'three', 4.5)
```
